Dear Colleague,

We kindly invite you to participate in the conference “Advanced Topics in Magnetism and Superconductivity” (AToMS-2014), to be held in Bariloche, Patagonia, Argentina, from July 31st to August 4th 2014. This conference is a satellite to the “27th International Conference on Low Temperatures Physics (LT27)”, starting the 6th of August in Buenos Aires, Argentina.

We just opened the webpage for registration and abstract submission (deadline Wednesday 30th April). Contributions will be published in a special issue of the Journal of Low Temperature Physics.

The main purpose of AToMS-2014 is the exchange of new ideas on current topics of Magnetism and Superconductivity. Additionally, we will dedicate one day (Saturday 2nd of August) to celebrate the research and academic career of Prof. Dr. Julián Sereni and his contributions to the field.

AToMS-2014 is organized by the Low-Temperatures Laboratory and the Solid-State-Theory Group of Gerencia de Física, Centro Atómico Bariloche, Comisión Nacional de Energía Atómica. The main topics of AToMS-2014 include:

- frustration and exotic order in magnetic systems,
- quantum phase transitions,
- strongly correlated electronic systems,
- coexistence between superconductivity and magnetism,
- new superconductors,
- soft condensed matter in superconducting and magnetic materials,
- superconductivity at the mesoscopic-scale.

Looking forward to meeting you at Bariloche,

Local Organizing Committee of AToMS-2014

Important dates:

Opening of abstract submission and registration:	February 15th
Deadline for abstract submission:	April 30th
Deadline for early registration and payment:	May 31st
Deadline for manuscript submission:	July 15 th
