Abstract – The closing summaries of ISS-2013 contributions on *Wires, Tapes & Characterization* highlight the latest achievements and developments in processing, optimization and characterization of Nb₃Sn low-temperature superconductors, MgB₂, as well as BSCCO and REBCO high-temperature superconductors.

Keywords - Nb₃Sn, MgB₂, BSCCO, REBCO, coated conductors, low-cost processing, delamination, AC losses, artificial pinning centers, in-field properties
