

Dear colleagues,

We are pleased to announce the **1<sup>st</sup> High Temperature superconductor Accelerator Technology (HiTAT) workshop which will be held at CERN on 9-10 March 2023, CERN, Geneva, Switzerland.**

HiTAT, on this occasion organised in the framework of the *H2020-I.FAST project – WP8: Innovative Magnets*, follows [the WAMHTS-5 event](#), organised in the framework of the H2020-Aries project (WAMHTS-5, Budapest, Hungary, 11-April 13, 2019).

The focus of the program is on REBCO coated conductor for use in Hadron Therapy accelerators, accelerator magnets, including post HL-LHC high energy colliders and beam lines.

A draft programme, along with practical information regarding venue and accommodation (hotels and booking form), is available at the [workshop website](#). The main topics that will be discussed are: progress on HTS superconductor; characterisation of tapes and cables; magnet technology and R&D in the on-going main R&D programs. The detailed program will be communicated in early February 2023 with the second announcement of the workshop.

Participation in the workshop is by invitation only and is free of charge. Participants should cover the cost of their travel and accommodation. **Registration is now open**, feel free to register as soon as possible in order to help us regarding the organisation. Some rooms have been pre-booked at the CERN Hostel until early February 2023. If you are interested to book a room please send an e-mail to [Valerie.Brunner@cern.ch](mailto:Valerie.Brunner@cern.ch).

We look forward to meeting you at CERN,

Valérie Brunner on behalf of the HiTAT Organising Committee

**Chairs:**

Amalia Ballarino, CERN

Lucio Rossi, INFN & University of Milano

**Program Committee:**

Amalia Ballarino, CERN

Lucio Rossi, INFN & University of Milano

Bernhard Auchmann, PSI & CERN

Anna Kario, University of Twente

Thibault Leclercq, CEA

Carmine Senatore, University of Geneva

Yifeng Yang, University of Southampton

Valerie Brunner, CERN (administrative support)
