

Applied Superconductivity: Handbook on Devices and Applications

(Wiley VCH, 2015)

CONTENTS

Preface (Paul Seidel)

1. Fundamentals

1.1 Superconductivity

1.1.1 Basic Properties and Parameters of Superconductors (Reinhold Kleiner)

1.1.2 Review on Superconducting Materials (Roland Hott, Reinhold Kleiner,
Thomas Wolf, Gertrud Zwicknagel)

1.2 Main Related Effects

1.2.1 Proximity Effect (Mikhail Belogolovskii)

1.2.2 Tunneling and Superconductivity (Steven Ruggiero)

1.2.3 Flux Pinning (Stuart Wimbush)

1.2.4 AC Losses and Numerical Modeling of Superconductors (Francesco Grilli, Frederic Sirois)

2. Superconducting Materials

2.1 Low Temperature Superconductors

2.1.1 Metals and Alloys (Helmut Krauth, Klaus Schlenga)

2.1.2 Magnesium Diboride (Davide Nardelli, Ilaria Pallecchi, Matteo Tropeano)

2.2 High Temperature Superconductors

2.2.1 Cuprate High Temperature Superconductors (Roland Hott, Thomas Wolf)

2.2.2 Iron-based Superconductors (Ilaria Pallecchi, Marina Putti)

3. Technology, Preparation and Characterization

3.1 Bulk Materials

- 3.1.1 Preparation of bulk and textured Superconductors (F. N. Werfel)
- 3.1.2 Single Crystal growth of the high temperature superconducting cuprates (Andreas Erb)
- 3.1.3 Properties of Bulk Materials (Günter Fuchs, Gernot Krabbes, W.-R. Canders)

3.2 Thin Films and Multilayers

- 3.2.1 Thin Film Deposition (Roger Wördenweber)

3.3 Josephson Junctions and Circuits

- 3.3.1 LTS Josephson Junctions (Hans-Georg Meyer, Ludwig Fritsch, Solveig Anders, Matthias Schmelz, Jürgen Kunert, Gregor Oelsner)
- 3.3.2 HTS Josephson Junctions (Keiichi Tanabe)

3.4 Wires and Tapes

- 3.4.1 Powder-in tube Superconducting Wires: Fabrication, Properties, Applications, and Challenges (Tengming Shen, Jianyi Jiang, Eric Hellstrom)
- 3.4.2 YBCO Coated Conductors (Mariappan Parans Paranthaman, Tolga Aytug, Liliana Stan, Quanxi Jia, Claudia Cantoni)

3.5 Cooling

- 3.5.1 Fluid Cooling (Luca Bottura, Cesar Luongo)
- 3.5.2 Cryocoolers (Gunter Kaiser, Gunar Schröder)
- 3.5.3 “Cryogen-free” Cooling (Gunter Kaiser, Andreas Kade)

4. Superconducting Magnets

- 4.1 Bulk Superconducting Magnets for Bearings and Levitation (John R. Hull)
- 4.2 Fundamentals of Superconducting Magnets (Martin N. Wilson)
- 4.3 Magnets for Particle Accelerators and Colliders (Lucio Rossi, Luca Bottura)
- 4.6 Superconducting Magnets for Fusion (Jean-Luc Duchateau)
- 4.7 High-temperature superconducting (HTS) Magnets (Swarn Kalsi)

4.8 Magnetic Levitation and Transport (John R. Hull)

5. Power Applications

5.1 Superconducting Cables (Werner Prusseit, Robert Bach, Joachim Bock)

5.2 Practical design of HTS current leads (Jonathan A. Demko)

5.3 Fault Current Limiters (Swarn Kalsi)

5.4 Transformers (Antonio Morandi)

5.5 Energy Storage (SMES and flywheels) (Antonio Morandi)

5.6 Rotating Machines (Swarn Kalsi)

5.7 Smart Grids: Motivation, Stakes, and Perspectives/Opportunities for Superconductors (Nouredine Hadjsaid, Pascal Tixador, Jean-Claude Sabonadiere, C. Gandioli, M.-C. Alvarez-Herault)

6. Superconductive Passive Devices

6.1 Microwave Components (Neeraj Khare)

6.2 Cavities for Accelerators (Sergey Belomestnykh, Hasan S. Padamsee)

6.3 Superconducting pickup coils (Audrius Brazdeikis, Jarek Wosik)

6.4 Magnetic Shields (James Claycomb)

7. Applications in Quantum Metrology

7.1 Quantum Standards for Voltage (Johannes Kohlmann)

7.2 Single Cooper pair circuits and Quantum Metrology (Alexander B. Zorin)

8. Superconducting Radiation and Particle Detectors

8.1 Radiation and Particle Detectors (Claus Grupen)

8.2 Superconducting Hot Electron Bolometers and Transition Edge Sensors (Giovanni Piero Pepe, Roberto Christiano, Flavio Gatti)

8.3 Mixers (Doris Maier)

8.4 Superconducting Photon Detectors (Michael Siegel, Dagmar Henrich)

8.5 Applications at THz Frequencies (Masayoshi Tonouchi)

8.6 Detector Readout (Thomas Ortlepp)

9. Superconducting Quantum Interference (SQUIDs)

9.1 Introduction (Robert Fagaly)

9.2 Types of SQUIDs (Robert Fagaly)

9.3 Magnetic field sensing with SQUID devices

9.3.1 SQUIDs in laboratory applications (Robert Fagaly)

9.3.2 SQUIDs in NDE (Hans-Joachim Krause Michael Mück, Saburo Tanaka)

9.3.3 SQUIDs in Biomagnetism (Hannes Nowak)

9.3.4 Geophysical exploration (Ronny Stolz)

9.3.5 Scanning SQUID Microscopy (John Kirtley)

9.4 SQUID Thermometers (Thomas Schurig, Jörn Beyer)

9.5 Radio Frequency Amplifiers based on DC-SQUIDs (Michael Mück, Robert McDermott)

9.6 SQUID-based Cryogenic Current Comparators (Wolfgang Vodel, Rene Geithner, Paul Seidel)

10. Superconductor Digital Electronics

10.1 Logic Circuits (John X. Przybysz, Donald L. Miller)

10.2 Superconducting Mixed-Signal Circuits (Hannes Toepfer)

10.3 Digital Processing (Oleg Mukhanov)

10.4 Quantum Computing (Jürgen Lisenfeld)

10.5 Advanced superconducting circuits and devices (Martin Weides, Hannes Rotzinger)

10.6 Digital SQUIDs (Pascal Febvre)

11. Other Applications

11.1 Josephson Arrays as Radiation Sources (incl. Josephson Laser) (Huabing Wang)

11.2 Tunable Microwave Devices (Neeraj Khare)

12. Summary and Outlook (Herbert Freyhardt)
